

## **A Foldable Pillow**

### **Abstract**

A pillow that can be folded or rolled into a plurality of configurations is described.

- 5 Preferred embodiments of the pillow typically comprise an elongated viscoelastic foam pad that can be evenly folding into half, thirds or quarters to create a formed pillow of varying thicknesses. Additional configurations are possible by rolling the pad or unevenly folding the pad. A pillow covering can also be provided that is longer than the foam pad such that the excess portion of the covering can be tucked under the formed foam pad to hold the pillow in its
- 10 formed configuration. Because of its customizability, the pillow is adaptable for use by all types of sleepers including back sleepers, side sleepers, stomach sleepers and sleepers who switch sleeping positions during the night.
